

forNextDay()

Write 2 C programs:

1. `readin`: Reads (character-by-character) from a file named on the command line and write (character-by-character) the content to standard out. Use `otherFile.txt` from L12src.
2. `writeout`: Reads (character-by-character) from standard in (no prompts) and writes (character-by-character) to a file named on the command line

- Run and test the programs like this

```
$ readin in.txt | writeout out.txt
```

```
$ diff in.txt out.txt
```
