

ForNextDay()

- Create a simple test program that calls the zero function (L5A - slide 13) and draw a stack diagram for it.
 - **Submit the diagram**
- Compile and run the `swap.c` program (see L5src on the lms)
- Correct it so that it really does swap values.
 - **Submit the corrected source**
 - Tell the duck what is happening as you manually execute the programs in your head (no submission necessary 😊)
- Look back over the code you've written to-date and the example code for the course. Construct a `myutils.c/.h` library module.
- Compile and test it.
 - **Submit the test program source**
