

## For Next DAY

- Write and run a program that lists the addresses and values for the command line arguments passed to it – the `char** argv`, the array of `char*` and the strings themselves. Submit the code and test output.

1

## For Next DAY

- Using the `mystring.zip` file
  - Using the project's Makefile, explain the purpose of
    - `$$` symbol
    - `$(CFLAGS)`
  - Alter the Makefile so that compiling objects uses the suggested pattern rule from the slides
  - write the `main.c` to call each of the functions in `mystring.h`.
- Show the `main.c`, revised Makefile, output from `make` to build the project, and program output.
