

forNextDay()

- Write short paragraph describing the four regions of process memory.
- Write a short paragraph describing how stack memory works, to the level of detail shown in this presentation.

1

forNextDay()

- Based on this lecture, as well as examining the output from `memory.c`, draw a stack frame for the following program. Assume that the bottom of the process is at address `0xffff`. Your addressing should be in hexadecimal and use actual datatype sizes.

```
int main(void){
    char c;
    int i;
    double d;
    int iArr[4];
    ...
    return EXIT_SUCCESS;
}
```
